PIPING WORK SERVICES PTY. LTD.

Australian Company Number: 165 600 886

Company Profile

Piping Works Services Pty Ltd, trading as Pipework Services, was founded in 2013 by the owner, Malcolm (Tony) Halliday. Tony had been operating as a sole trader in Australia and as a Limited Incorporated company, M A Halliday Consulting, internationally. The need for a formal structure arose as a result of expanding work in Australasia.

Piping Work Services, is now a leading boutique Process Piping Design and Installation contracting company, that provides specialised services to the petro-chemical, mining, defence and water industries world wide.

Pipework Services has successfully completed a range of projects throughout the world and maintains a permanent presence in the Australia, Vietnam, South Africa and USA, servicing long term customers in the Minerals Processing and Oil & Gas Industry.

The company has a strong focus on working safely, maintaining ongoing training in safe work practices and a proactive approach to environmental and risk management with contracts completed in the United States of America, South Africa, Papua New Guinea, East Timor and Australia.

The company operates its own dedicated Engineering and Piping Design support offices, which support the construction installation and commissioning teams of EPCM and small project developers needing specialized high end piping design needs, process optimization and troubleshooting. This enables the company to offer complete project management from scoping, design, construction through to commissioning, with the continuity that is often lost in bigger engineering contractors.

The company Quality Management System is structured to comply with the requirements of AS/NZS ISO 9001:2008.

The Quality Management System for the design management, manufacture and repair of pressure piping systems and process equipment, the manufacture of dedicated systems, installation of piping systems & dam liners and repair of pipe work including Poly lining of dams and HDPE piping; Process Flow Optimization and the maintenance of plant and equipment.

We are therefore able to offer a wide range of services based on our in house

capabilities namely:

Fabrication

Our contracted workshops world wide provide the strength of highly skilled operators with suitable resources and technical aids to deliver a broad range of services, including: fabrication of pipe spooling, pressure piping, high abrasion resistant piping, welding of all material grades and polymers, modular skid construction of pumping and process units, machinery and material handling design, upgrading and commissioning, from small pilot operations to interfacing with major EPCM construction work.

Installation

With our extensive range of equipment and experienced personnel we have the capability of delivering site based projects, including: new installations, repairs and maintenance, shutdown work combined with our design, procurement, workshop, project management and QA strengths. We also offer a range of "Owners Engineers" options to companies needing specialized expertise's that that they maybe lacking in-house world wide.

Project Management

Our in house team of Project Managers, Engineers and Supervisors ensure that all projects are carried out using proven project management methods. We use the latest computer assisted technology, but still have the hands on skills to work in third world environments where technology based management can be comprised.

Our worldwide team is dedicated to minerals and Oil & Gas process development and are leaders in their field.
